

International preferences

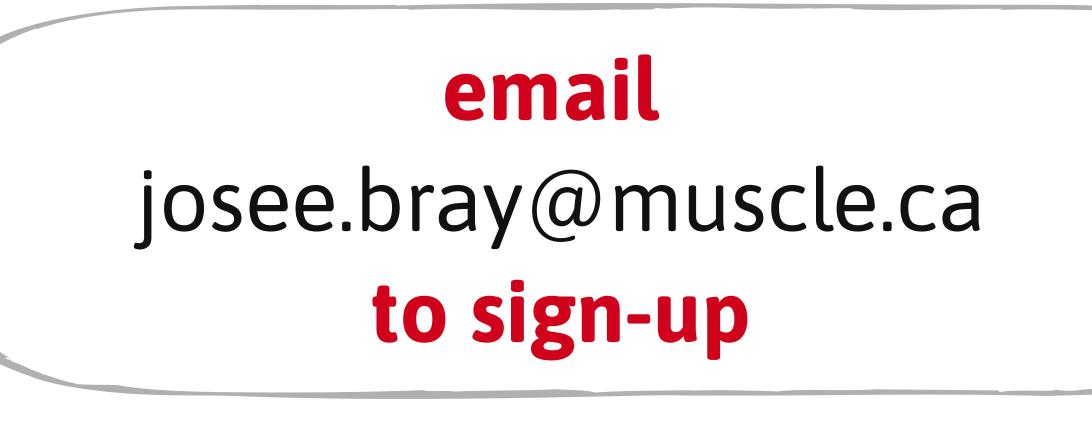

for Duchenne treatments

This survey is about your **preferences** and **priorities** for Duchenne muscular dystrophy treatments. This is the first study to measure Duchenne preferences **internationally**. DMD advocacy organizations internationally have come together to launch this survey, and results will be returned to patient advocacy organizations and used to inform policymakers about what you want out of treatments, and what risks you are willing to take.

Survey info

- Online
- 45-60 minutes
- No payment
- Some questions might make you feel upset. Treatments described include

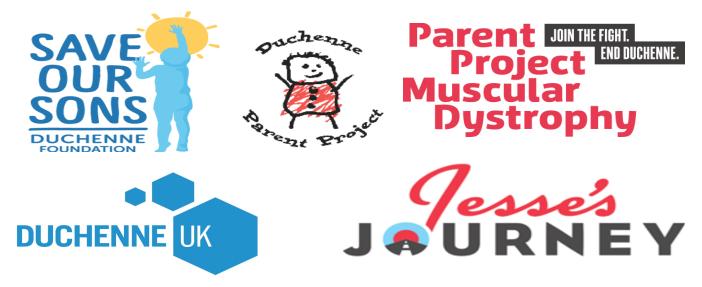

Who can participate?

risks of serious side effects.

- It is your choice to participate
- You can stop the survey at any time
- Results will be anonymous
